## 9) **Visibilité (si pertinent) / Visibility (if relevant)**

- Standardized Citation Metric<sup>4</sup> developed in Stanford University proposes a ranking of the top 2% most cited researchers *in all research fields*. The ranking is usually published in October of the year  $N$  based on the citations in the year  $N - 1$  (resp., in the years  $\leq N - 1$ ).
  - For the single year ranking in the field "*Industrial Engineering & Automation*" (my research field), about 80 French researchers are presented in the list of top 2%. In this list I was ranked the **1st of 86** in 2022 and the **2nd of 81** in 2023.
  - For the whole carrier ranking in the field "*Industrial Engineering & Automation*", about 120 French researchers are presented in the list of top 2%. In this list I was ranked the **17th of 116** in 2022 and the **14th of 122** in 2023.

## 10) **Publications / Publications**

My three most representative publications:

- A. Polyakov, [Nonlinear feedback design for fixed-time stabilization of linear control systems](#), IEEE Transactions on Automatic Control, 2012. The paper introduces the principles of fixed-time control design. This is my most cited paper (>3000 citations). The paper is still in the list of [top 5 most popular papers](#) in IEEE Transactions on Automatic Control (the top journal in the field of Automation & Control Theory).
- A. Polyakov, D. Efimov, W. Perruquetti, [Finite-time and fixed-time stabilization: Implicit Lyapunov function approach](#), Automatica, 2015. The paper was cited [more than 700 times](#). This paper was in the [top 20 most cited papers](#) published in Automatica in 5 years. It introduces implicit Lyapunov function method for finite/fixed-time control design.
- A. Polyakov, [Generalized Homogeneity in Systems and Control](#), Springer, (2020, 1st Edition and 2024, 2nd Edition - *in process*). This is the only monograph existing today, which presents an introduction to the theory of generalized homogeneous control systems. The second edition of the book is going to be more friendly for the reader having engineering backgrounds and covers both finite and infinite dimensional control systems. It provides a road map of homogeneous control systems design from purely theoretical (abstract) ideas to their applications in real electro-mechanical systems (such as flying and terrestrial mobile robots).

I have (co-)authored more than 100 articles in international peer-reviewed journals. Most of them are in the field of Automation & Control Theory. The most recognized (the top 1-2 in the field) journals in this field are **IEEE Transactions on Automatic Control** (15 papers) and **Automatica** (23 papers), respectively.
