PROGDB'20

TD 4 : Inverted Indexes

During this exercise you will index the movie database `movies.db`. You are to create an inverted index allowing to efficiently find movies by the keywords present in their overview. Illustrate how to use your index by searching for any movie about "beautiful" "captured" "princess".

You are to submit a ZIP archive containing the Python files `index-movies.py` and `find-movie.py`. The first file should index should create the inverted index and the second should perform the search. The database file is to be accessed at `/tmp/movies.db`.
